

Science and Technology Park

Dla Studenta

The Opole Science and Technology Park stimulates and facilitates the flow of knowledge and technology between Opole universities and companies, supporting entrepreneurship based on innovative solutions. The role of the Opole STP is to serve as a scientific and technological platform, develop new technologies and carry out innovative projects with the help of its newly-built, dedicated laboratory and office infrastructure.

The STP's guiding principle, M.I.N.D., was formed based to reflect its mission and the challenges posed by the local economy. The M.I.N.D. gives birth to thoughts – ideas, modern technologies, their uniqueness and development. When properly stimulated by the team of researchers employed in the Park, it helps overcome the challenges of the modern job market. The idea behind the STP is best expressed in its guiding principle – the STP is a MINDPARK belonging to all residents of the voivodeship, including students.
